

Augmented Switching™ Accelerated Development Kit Digital Programmable Gate Drivers

Unlock the Full Potential of SiC

Microchip's Accelerated Silicon Carbide Development Kit includes the hardware and software elements required to rapidly optimize the performance of the Microchip family of SP6LI Low Inductance SiC modules and systems.

This new tool enables designers to adjust system performance through software upgrades using the AgileSwitch® Intelligent Configuration Tool (ICT) and a Device Programmer. No soldering required.

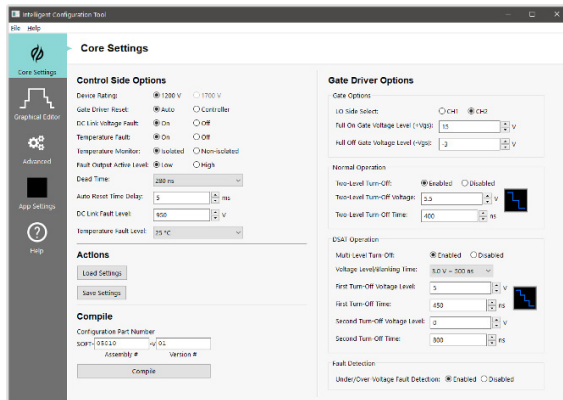

The ICT offers configuration of different drive parameters including on/off gate voltages, DC link and temperature fault levels and Augmented Switching™ profiles.

Small changes to the Augmented Switching profiles can yield dramatic improvements in switching efficiency, overshoot, ringing and short-circuit protection.
